1. User logs in and has "Student" or "POS approver" role access

2. User selects to update POS

3. If user is an approver, user enters student info,
cs student may only view their own POS, so no entry required

4. System returns student POS

5. User enters any desired changes to POS

6. User saves changes

7. System saves entered POS changes

```
              :User                    System

      login(username,password)
      ──────────────────────────────▶

         update(studentInfo)
      ──────────────────────────────▶
 ┌─────────┐[POS Approver]
 │  OPT    │  enter(studentInfo)
 │         ──────────────────────────▶
 └─────────┘
           return(studetPOS)
      ◀──────────────────────────────

           enter(changes)
      ──────────────────────────────▶

             save(POS)
      ──────────────────────────────▶
```
